

Transcript for the White Sands Missile Range video:

At White Sands Missile Range, New Mexico, DTC tests all elements of air defense missile systems. Air Force, Navy, NASA, Foreign Governments, and private contractors also use White Sands for missile testing. White Sands has pioneered technology to test for today's weapons and equipment. The effects of nuclear weapons on equipment are safely tested in DOD's Large Blast Thermal Simulator at White Sands Missile Range which simulates a nuclear blast. On White Sands Aerial Cable Range, missile targets can be precisely controlled at less expense than using drone targets that would be destroyed with each test.
