

Transcript for the Yuma Proving Gound video:

Yuma Proving Ground, headquartered in the desert of south west Arizona, is the focus of the Army's Natural Environmental Testing. Yuma Proving Ground tests a variety of artillery, mines, air delivery systems, and aerial armaments. Yuma is also DTC's prime location for testing the performance of vehicles and other equipment in the heat, sand, and dust of the desert. Yuma's size gives it the unique ability to conduct integrated testing with air and ground units. Yuma's natural environmental test missions also encompass tropic testing at the Tropic Regions Test Center activities in Puerto Rico and Hawaii. And the Cold Regions Test Center at Ft. Greely, Alaska.
